

DARIO GARAVELLO

SOFTWARE ENGINEER | FULL-STACK | CLOUD & AUTOMATION

Software Engineer with strong experience in mobile, web and backend development, focused on building, modernizing and operating applications in cloud environments. I have worked across different technical contexts, combining product development, technical leadership and platform-related responsibilities.

I have hands-on experience with Azure and containerized platforms such as OpenShift (OCP) and Rancher, as well as previous experience with AWS and backend-oriented architectures. My approach is centered on scalability, security, observability and continuous improvement, participating in technical migrations, CI/CD enhancements and reduction of technical debt.

EDUCATION

Bachelor of Social Sciences:

- Colegio Secundario San Carlos Borromeo – 2012

Training courses:

- POO - Udemy 2020
- React - Udemy 2020
- Clouding AWS - Udemy 2021

TECHNICAL SKILLS

Languages & Frameworks:

- JavaScript / TypeScript
- React Native, React.js
- Node.js, .NET Core

Cloud & Platform:

- Azure
- AWS (EC2)
- OpenShift (OCP), Rancher

Databases:

- SQL Server, Oracle, MongoDB

Testing & Quality:

- Jest, Vitest, Supertest, Playwright

CI/CD & DevOps:

- GitHub Actions
- GitLab CI

Security & Observability:

- JWT, Helmet
- Elastic APM

Agile:

- SCRUM, Jira

PROFESSIONAL EXPERIENCE

○ Dic 2021 – Present

Grupo Logístico Andreani, Buenos Aires (ARG)

Software Engineer – Fullstack / Mobile Developer

- Development and maintenance of mobile, web and backend solutions for business-critical logistics systems.
- Mobile application development using React Native (without Expo) with TypeScript and Redux Toolkit.
- Web frontend development with React.js and Material UI, focusing on scalable and maintainable component-based architecture.
- Design and maintenance of REST APIs using .NET Core (6 / 3.1) and Node.js.
- Data integration with SQL Server, Oracle and MongoDB.
- Operation of applications in Azure environments, deploying containerized workloads on OpenShift (OCP) and Rancher.
- Active participation in technical migrations, removing legacy dependencies (react-scripts, runtime-env-cra) and adopting RSBuild.
- Implementation of monitoring and observability using Elastic APM.
- Adoption of automated testing practices (Jest, Vitest, Supertest, Playwright).
- CI/CD automation using GitHub Actions and GitLab CI.
- Application of security best practices using JWT and Helmet.
- Work under SCRUM methodology using Jira.

○ Oct 2020 – Nov 2021

Konzortia Capital, Costa Rica (Cos)

Fullstack Engineer & Technical Lead

- End-to-end development of web, mobile and backend solutions.
- Frontend development using React.js, Vue.js and WordPress.
- Development of hybrid mobile applications using Apache Cordova.
- Design and implementation of REST APIs with Node.js.
- Deployment and operation of applications on AWS (EC2).
- Technical leadership of a web project built with React.js, coordinating the development team.
- Definition of technical guidelines, code reviews and architectural decision support.

LANGUAGES

- English - (B2)
- Spanish - Native

Mar 2017 – Presente

Dario Garavello, Buenos Aires (ARG)

Freelance Fullstack Developer

- Designed, developed and maintained end-to-end web and mobile solutions for e-commerce platforms, management systems and MVP products, working with a modern full-stack architecture.
- Built frontend applications using Next.js, React and TypeScript, focusing on performance, SEO, responsive UX and scalable component design.
- Developed backend services with Node.js / Express, GraphQL and relational databases such as PostgreSQL, including managed solutions like Supabase.
- Implemented real-world production features such as authentication and authorization flows, role-based access, and secure API design.
- Integrated payment gateways including Stripe and Mercado Pago, handling product catalogs, checkout flows and transaction validation.
- Built mobile applications using React Native (Expo), integrating local storage (SQLite) and real-time communication via Socket.IO.
- Developed hybrid mobile applications using Vue.js + Apache Cordova, as well as landing pages, waitlists and professional portfolios oriented to user acquisition.
- Applied strong engineering practices, including automated testing (Jest, Supertest, Vitest, Playwright), security best practices (JWT, Helmet) and clean code principles.
- Deployed and operated applications using Vercel, Render and Railway, ensuring reliable, maintainable and production-ready deliveries.

AUTOMATION & INTEGRATIONS:

- Design and implementation of process automations using Zapier.
- Integration of APIs and external systems through event-based workflows.
- Messaging and notification integrations using Twilio.
- Experience with low-code / no-code automation solutions, with skills transferable to platforms such as n8n.
